Explanation of QC Flag Comments:

Code	Explanation				
Q	Matrix interferences affecting spike or surrogate recoveries.				
Q1	Quality control result biased high. Only non-detect samples reported.				
Q2	Quality control outside QC limits. Data considered estimate.				
Q3	Sample concentration greater than four times the amount spiked.				
Q4	Non-homogenous sample matrix, affecting RPD result and/or % recoveries.				
Q5	Spike results above calibration curve.				
Q6	Quality control outside QC limits. Data acceptable based on remaining QC.				
R	Relative percent difference (RPD) outside control limit.				
R1	RPD non-calculable, as sample or duplicate results are less than five times the LOQ.				
R2	Sample replicates RPD non-calculable, as only one replicate is within the analytical range.				
LOQ1	Quantitation level raised due to low sample volume and/or dilution.				
LOQ2	Quantitaion level raised due to matrix interference.				
В	Analyte detected in method blank, but not in associated samples.				
B1	The sample concentration is greater than 5 times the blank concentration.				
B2	The sample concentration is less than 5 times the blank concentration.
